SURYAKANT CHAURASIYA

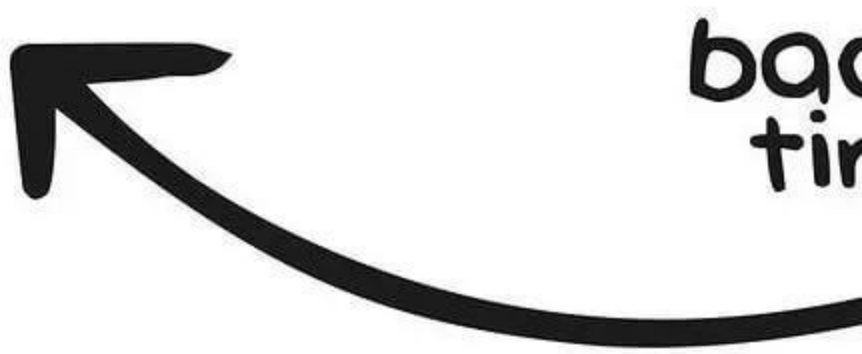
explain to kid GIT

programming concepts

SURYAKANT CHAURASIYA

lets say you are coding
and your code is working fine

and you
close your
laptop →



SURYAKANT CHAURASIYA

next day, you mess up your code and it **stops working**

and now you wish that you can go back in time when it was working fine

SURYAKANT CHAURASIYA

this is where we use **GIT**

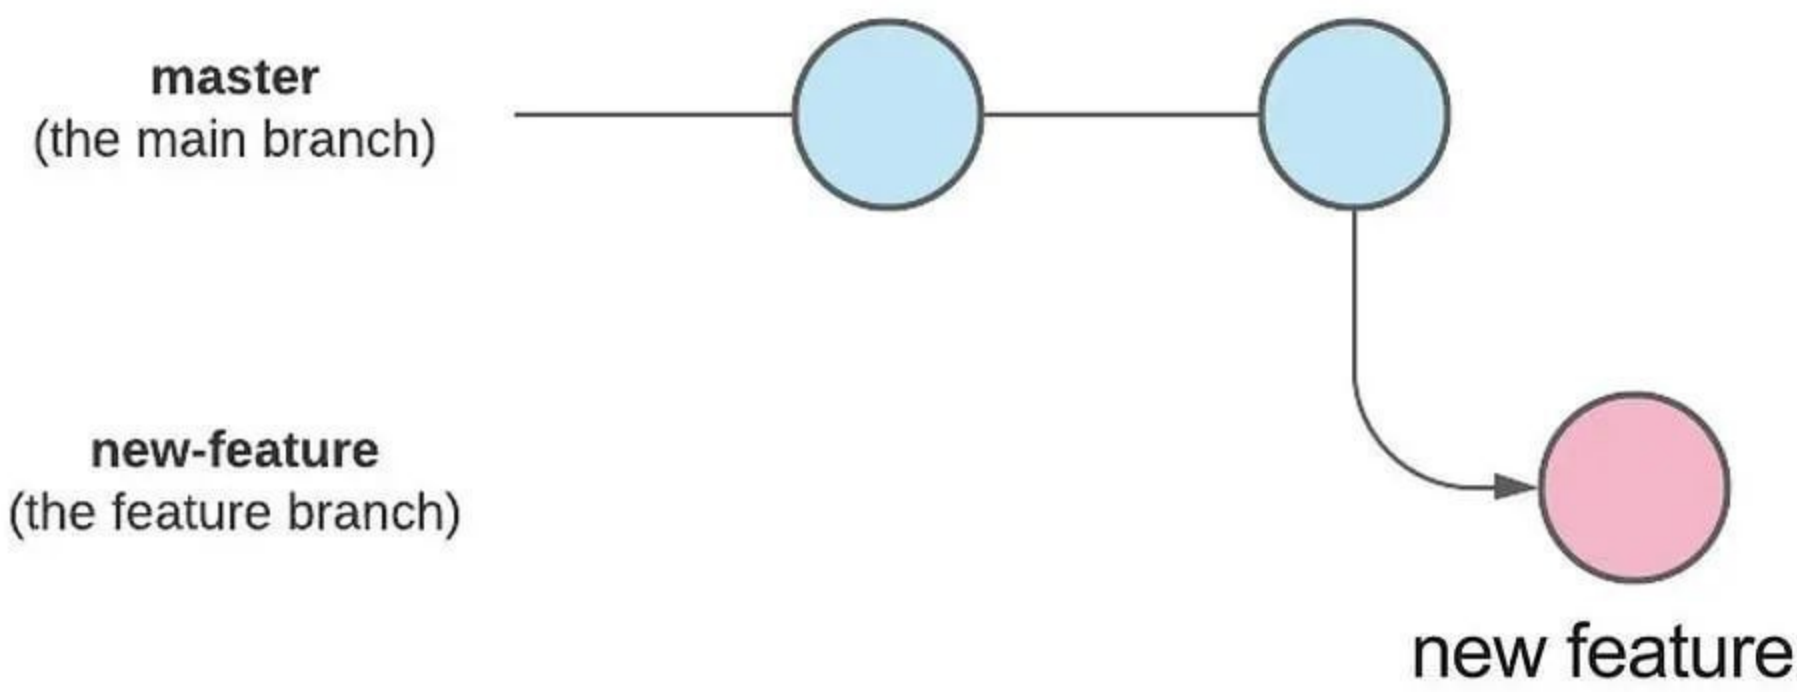
Git is a tool that helps Coders track changes in their code

it does a lot more than that →

SURYAKANT CHAURASIYA

you can add a new feature by creating a new branch

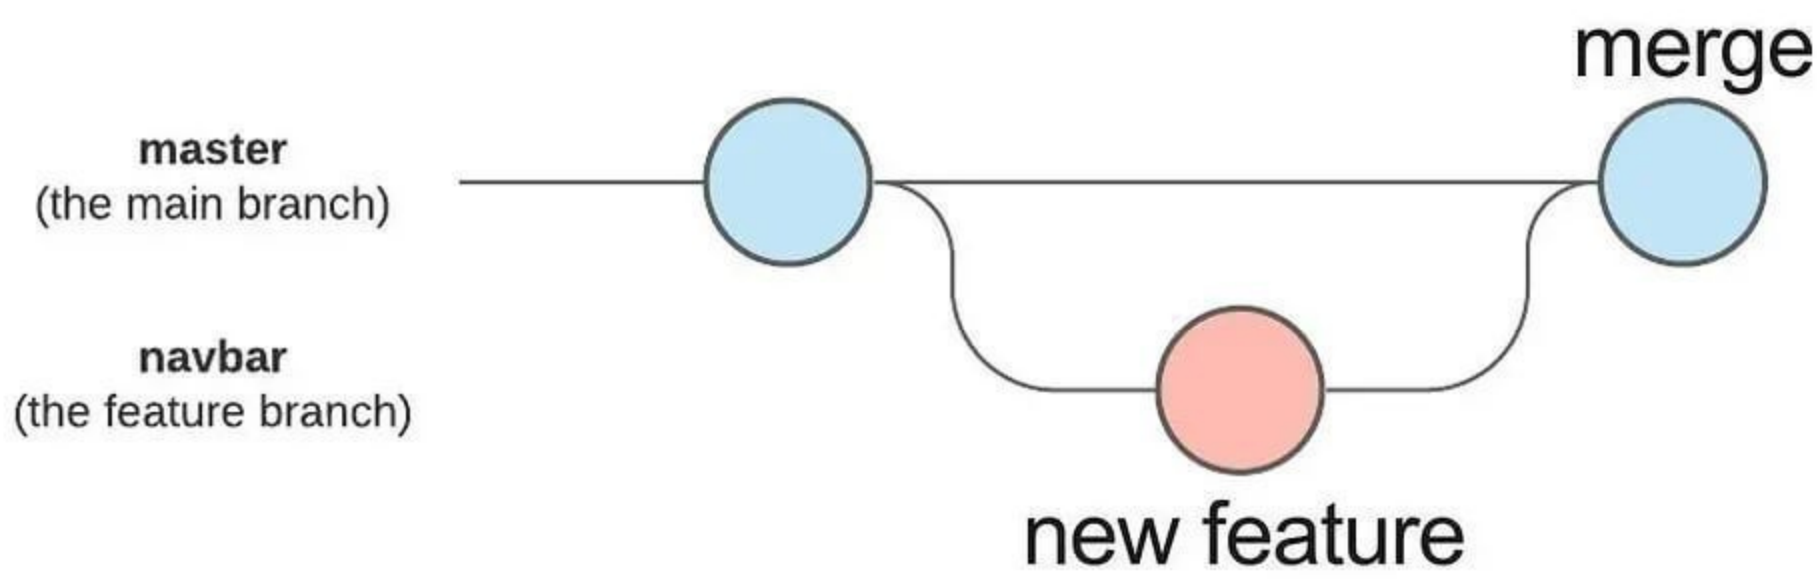
anything you code in the new branch won't effect the main branch



SURYAKANT CHAURASIYA

and when you are happy with your new feature

you can merge your new branch with the main branch



you can do all this with
the help of **Github**

and every coders should use it
even if you a beginner

thank you for watching,
i hope this helped you
