testsigma

Types of bugs

found during API testing

Duplicate Functionality

When more than one APIs perform the same function

Missing Functionality

When a requirement is not fulfilled by any of the APIs developed

Compatibility

When APIs don't work well with certain platforms, frameworks, or languages, leading to integration issues

Error Handling

When APIs don't provide correct error messages for unexpected/ invalid requests

Security

When APIs are accessible to unauthorized users too

Reliability

When APIs may not be available at all times

Performance

When APIs take a long time to respond, it could be at an increased load

Documentation

When APIs don't have adequate or easy-to-understand documentation
